

# Steel horseshoe or barefoot?

## Keep the advantages of both

The comfort of a foot protection  
& the natural functioning of a barefoot

**SAFE**

HP

SAFE HP innovates by offering **flexible horseshoe** (soles) **without metal inserts** which **respect the physiology of the foot** while **allowing it to function** at its best.

- Replacement of steel horseshoe
- Ideal for transitioning to barefoot
- For temporary barefoot protection

**2 fittings**

**Nailed**

Suitable for all disciplines  
(retirement, leisure, competition)  
and compatible with crampons

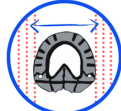

Suitable for all types of horse  
(stalled, stabled or herded)

**Glued**

Available for foot widths  
from 100 to 220 mm

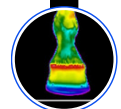

Re-usable over 3 fitting cycles  
~ 20 weeks average life time

**studdable**

Thermogram similar to one of a  
barefoot

Let their feet do the work,  
with the protection they need!

## A proven solution for horse comfort and performance

- Allow the feet to fulfill **their role as shock absorbers** and **blood circulation activators**
- **Reduces osteoarthritis symptoms** for the horse and veterinary costs for the owner
- Significant **improvement in the horse's locomotion, well-being and performance**

### Testimony of Alexandre Ayache - French dressage team rider

"Since my horses have been shoeing these flexible horseshoes, there's nothing like it. Locomotion has improved and the horses are much healthier! When they come back from a competition, they're looser and less sore. Thermographic imaging has shown that blood circulation is much better than when wearing steel horseshoes. Growth is better, shockwave returns decrease significantly, in short, there are nothing but advantages!"

"I invite all farriers to take an interest in this solution for the well-being of their horses."

**SAFE equestrian flexible horseshoe benefit from excellent feedback from riders in various disciplines(driving, CCE, CSO, dressage, endurance, TREC...)**
