

Press-Sure

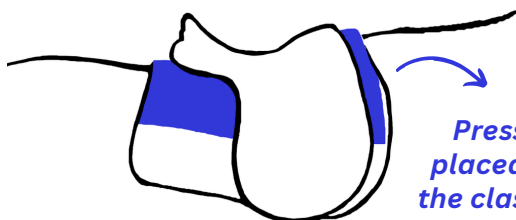

Visualise the pressure at any time,
at rest and in motion, and protect their backs!

SAFE HP is pursuing its **innovative approach** with **a dynamic pressure sensor pad** that **tracks the distribution and intensity of the pressure** exercised on the horse's back **in real time**.

A technology that's simple and easy to implement

A pressure sensor saddle pad

- Dynamic
- Wireless
- Ultra slim
- Robust

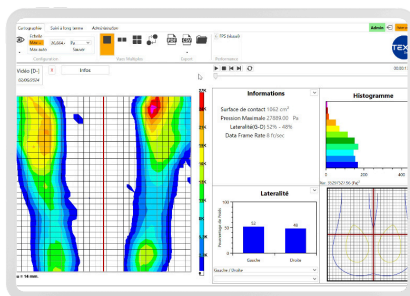

*Press-Sure is
placed between
the classic saddle
pad and the saddle*

Intuitive monitoring software

- Visual/easy to use
- Live tracking
- Recordable data
- Lateral distribution + rider centring point comparison
- Languages French / English

*Visualise pressure
distribution easily*

*Follow the
intensity of the
pressure applied*

Monitoring back pressure live helps to prevent and protect their backs

Ideal for

Validating the fitting of a saddle at rest or in movement

Quickly visualise the correct distribution of the weight under the saddle at rest or in movement, or detect any abnormal areas of overpressure.

Prevention of back problems of the horse, excessive pressure

Health check - Monitor the pressure exerted on the horse's back over time and adapt the equipment to prevent back problems.

Monitoring rider posture

Depending on the rider's movements and the exercises performed, monitor the rider's centring and lateral balance.

Powered by TexiSense

Ideal for saddlers, saddle-fitters, riders, vets and designers, this innovative tool improves their daily lives in a precise and intuitive way.
